16-18 August | ATKV Goudini Spa, Western Cape

CONFERENCE PROGRAMME

Inspiring Integrated Environmental Management:

Crafting innovative solutions to persistent environmental and social problems

WE WOULD LIKE TO THANK ALL OUR
SPONSORS AND EXHIBITORS

GOLD SPONSOR

Eskom is one of the top 20 utilities in the world by generation capacity. It generates approximately 95% of the electricity used in South Africa and more than 40% of the electricity used in Africa.

Eskom is more than just an electricity provider – we touch the lives of all our consumers, we uplift communities, create jobs, develop skills, invest in youth development, ignite industries and entrepreneurship.

Our vision of “Sustainable power for a better future” is achieved through various systems, amongst which are being signatory to the UN Global Compact, undertaking its business under certified Environmental Management Systems (ISO 14001), execution of, and compliance with, Environmental Impact Assessment (EIA) process, Water Use Licencing (WUL) processing, and other applicable permitting processes.

Eskom, as an organisation with a footprint into the future of integrated environmental management, embraces innovative conversations that support the realisation of Sustainable Development Goals. The variety of the sub-themes at the 2017 IAIAAsa 22nd Conference touches on all the elements of the 17 UN Sustainable Development Goals (SDGs) with which the Eskom business also interacts.

Thus, Eskom continues to support the IAIAAsa in ensuring best practices are adopted and implemented to contribute towards sustainable development through informed decision-making.

Should you have any further queries, please contact **Tobile Bokwe on 011 800 2303.**

Yours sincerely,

Deidre Herbst

About the IFC

International Finance Corporation (IFC), a member of the World Bank Group, focuses on the private sector to promote growth, reduce poverty, and improve people's lives in developing countries. IFC is the world's largest multilateral financier for companies that do business in emerging markets. We finance and advise clients to support profitable and sustainable business development in these markets.

About the IFC's Environmental and Social Risk Management Program

Financial institutions (FIs) face an increasing number of risks related to the activities of their clients. The impact of climate change, resource scarcity, environmental pollution and social issues are just some of the factors that increase the risks incurred by FIs, as they extend credit to clients.

The potential impact can be substantial. FIs may face increased credit, reputational, or liability risk. Recent local examples include media criticism of South African banks' continued financing of coal-fired power stations and media attention around Nedbank's investment in AngloGold Ashanti in Guinea, which has been implicated in forced resettlement.

The IFC's Environmental and Social Risk Management (ESRM) Program seeks to encourage FIs in Sub-Saharan Africa to adopt Environmental & Social (E&S) standards. This will, in turn, lead to an improvement in E&S performance of local businesses in the long term. In South Africa, the IFC will increase the uptake of E&S standards by FIs through regulatory level engagement, market level engagement and awareness raising.
