

PHP Developer

Our client is looking for a PHP Developer to work in their Florida office, Roodepoort. The candidate must come from a financing development background with BANKSERV experience to be considered for this position (this is non-negotiable).

The Role

Core responsibilities will include but are not limited to the following:

- Create, implement and support web-based products using PHP, MySQL, Ajax and JavaScript
- Develop back-end components, connect the application with other web services and producing front ends for user interfaces
- Write and edit PHP code on the back end of web applications and dynamic sites
- Consider the web application's intended function and work to integrate the PHP code with existing HTML code
- Work with the application's data structure to maintain reliable performance
- Work on PHP modules; block of code that can increase a web application's functionality and performance for specific tasks
- Design modules to be both reusable and portable so that they can be used for a variety of server-side tasks and be incorporated into future development projects
- Oversee that modules work independently and are successfully integrated into the application
- Test and troubleshoot applications both before and after deployment
- Ensure that the server-side elements of the application are working in tandem with the user interface
- Monitor that the application is receiving, parsing and storing data correctly
- Verify that all code elements are working independently and together
- Collaborate with other programmers and team members to meet deadlines (Scrum framework). This may involve initial meetings to determine the project's scope and needs and coordination throughout the implementation and testing processes, to resolve server-side issues by updating or reworking PHP code and/or modules
- See that the server-side and back-end code elements work in tandem with third-party services

- Work with third-party application programming interfaces (APIs) to access data between servers and applications
- Work with internal and external clients throughout the development process

Qualifications and Experience

- BSc/MSc in Computer Science, Engineering or a similar relevant field
- Previous working experience as a PHP Developer for ten years within a finance background
- Ten years' experience as a full stack developer
- Proficient in PHP, Javascript, MySQL, AJAX, jQuery, CSS and HTML
- Experience with building restful JSON web services
- Must have experience in troubleshooting and resolving defects and also have working experience in CRM framework.
